

CiteGuard — Simple Walkthrough

Very plain language for anyone on the team.

What is this app?

CiteGuard answers policy questions only from uploaded files. It shows the exact sentence it used. If it is not sure, it says “I don’t know.” That is safer than ChatGPT guessing.

Different from ChatGPT + a PDF

Giving ChatGPT a document does not stop wrong answers. ChatGPT can still invent rules and ignore old vs new versions. CiteGuard cites or refuses, checks currency, and keeps a log. Say this in Q&A.;

The three demo clicks

1. Open <https://citeguard-two.vercel.app>
2. Paid leave days → Ask → expect **18** + open a citation
3. Cafeteria pizza → Ask → **I don’t know**
4. Day 2: superseded policies → expect **22** (not 12), badges, banner

Day 2 in one sentence

Old leave was 12. New leave is 22. CiteGuard must use 22 and mark 12 as superseded.

Repo open order

CODEMAP.md → AGENTS.md → AGENTS_AND_SKILLS.md → DECISIONS.md (ADR-007) → policy-version.ts → faithfulness.ts → Actions green → v0.4.0

If Wi-Fi fails

Use npm start or docker compose. Same buttons. Skip Vercel CSV as the opener.

Remember: we cite or refuse — and only from the current policy. Not ChatGPT + a pasted file.
